

# LodgeCore

## Comprehensive Feature & Module Catalog

Product Edition: 2025 | Confidential — Prepared for Qualified Hotel Partners

*LodgeCore is an enterprise Hospitality Operating System designed to unify every aspect of your hotel into a single, intelligent platform. From front desk operations and restaurant management to financial reporting and guest experience, LodgeCore eliminates the fragmented software stack and gives your management team complete, real-time visibility over every naira generated and every room sold.*

15. Contact & Next Steps

## 1. The LodgeCore Architecture

LodgeCore is built on a modular, eight-pillar architecture that allows hotels to start with the essentials and expand as they grow. Three principles define the platform:

**Offline-First:** Many cloud-first hotel platforms depend heavily on continuous internet connectivity. LodgeCore is engineered so that core hotel operations — check-in, check-out, POS billing, room charges, and housekeeping — continue without interruption on your local property network even during extended internet outages. All transactions automatically synchronize to the cloud when connectivity is restored.

**Unified Data:** Every module — from the restaurant POS to the general ledger — shares a single database. When a waiter posts a meal to a guest's room, the charge instantly appears on the folio, the inventory is automatically deducted, and the revenue is correctly classified in the departmental P&L report. No manual data entry, no spreadsheet transfers.

**Scalable Modular Design:** A 20-room boutique hotel and a 300-room group chain can both run on LodgeCore. The platform is edition-based and expansion-ready, so your software investment grows with your property.

## 2. Module 1 — Core PMS (Property Management System)

*Foundation of your hotel's daily operations.*

| Feature                    | Description                                                                                                                                                                                                |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Interactive Tape Chart     | A visual, drag-and-drop room calendar. Receptionists see the entire property at a glance, move reservations by dragging, extend stays with a click, and instantly identify vacant rooms to sell.           |
| Reservation Management     | Centralised booking management for walk-ins, phone reservations, corporate accounts, and online bookings. Automated confirmation numbers prevent double-booking.                                           |
| Smart Folio & Billing      | Every guest has a digital folio — their running bill. Room charges, restaurant meals, laundry, telephone, and any other service post directly to it. One consolidated invoice at check-out.                |
| Group & Master Folios      | For corporate clients, delegations, or wedding parties, all individual room charges can be consolidated onto a single master invoice for the company or event organiser.                                   |
| Automated Night Audit      | Guided end-of-day processing that posts room charges, reconciles all POS activity, balances payments, closes the business day, and rolls the system date forward — in minutes.                             |
| Offline Transaction Engine | Check guests in, post charges, and complete POS sales even during total internet outages. All pending transactions synchronise automatically when connectivity resumes.                                    |
| Multi-Currency Support     | Accept payments in multiple currencies. The system tracks the property's base currency and the transaction currency, with configurable daily exchange rates and FX gain/loss reporting for the accountant. |

## 3. Module 2 — Operations (F&B & Housekeeping)

*Control every outlet, every room, and every item in your inventory.*

| Feature                | Description                                                                                                                                                                    |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Multi-Outlet POS       | A touch-optimised Point of Sale system for your Bar, Restaurant, Pool Bar, Room Service, and Lounge. Each outlet operates independently with its own menu and cashier session. |
| Direct-to-Room Billing | A waiter can post an entire restaurant bill to a guest's room folio with a single tap. The charge instantly appears on the guest's account at the front desk.                  |

| Feature                             | Description                                                                                                                                                                                                              |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Kitchen Display System (KDS)</b> | Food orders appear instantly on the kitchen screen. Drink orders route to the bar. Eliminates lost paper tickets and reduces order errors.                                                                               |
| <b>POS Cashier Controls</b>         | Opening and closing tills, shift-based cashier sessions, cash variance reports, refund controls, void approvals, and manager PIN overrides ensure full accountability at every POS terminal.                             |
| <b>Live Housekeeping Console</b>    | When a guest checks out, the room status updates to Dirty automatically. Cleaning staff view their assignment queue on mobile devices, mark rooms Clean or Inspected, and release them for sale — all in real time.      |
| <b>Maintenance Ticketing</b>        | Housekeepers log defects (e.g., broken AC, blocked drain) directly from their mobile device. The room is placed Out of Order automatically and the maintenance team receives an immediate alert.                         |
| <b>Inventory Tracking</b>           | Real-time stock quantities, movement logs, and automated low-stock alerts across all outlets and stores.                                                                                                                 |
| <b>Enterprise Procurement</b>       | Multi-warehouse management, internal stock requisitions, purchase orders, goods-received tracking, and automated POS consumption (every bar sale automatically deducts the correct items from the bar fridge inventory). |

## 4. Module 3 — Commerce (Direct Sales & Distribution)

*Maximise revenue and reduce dependency on third-party booking commissions.*

| Feature                                        | Description                                                                                                                                                                                                                                   |
|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Direct Booking Engine</b>                   | A professional, mobile-responsive public booking website for your hotel. Guests view room photos, check live availability, and complete reservations directly. No OTA commissions are applicable. Payment gateway fees apply per transaction. |
| <b>Booking Rules &amp; Packages</b>            | Configure minimum stay rules, blackout dates, seasonal rate plans, room packages (e.g., Bed & Breakfast, Full Board), and promotional codes with date-bound validity.                                                                         |
| <b>Booking Modification &amp; Cancellation</b> | Guests can modify or cancel reservations online within the cancellation policy parameters you define. The PMS updates automatically.                                                                                                          |
| <b>Channel Manager (Roadmap)</b>               | Two-way synchronisation with OTAs including Booking.com, Expedia, and Airbnb. When a room is sold on one channel, availability is instantly updated on all others, preventing double-booking.                                                 |

## 5. Module 4 — Finance (Hotel ERP & Accounting)

*A native double-entry accounting system built exclusively for hotel financial operations. Eliminates the need for disconnected third-party accounting software.*

| Feature                                  | Description                                                                                                                                      |
|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>City Ledger (Accounts Receivable)</b> | Track all outstanding balances owed by corporate clients and travel agents. Automated aging reports help your finance team collect debts faster. |

| Feature                                           | Description                                                                                                                                                                                 |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Native General Ledger</b>                      | A true double-entry chart of accounts built directly into the PMS. All PMS transactions automatically generate the correct ledger entries. No manual export to QuickBooks or Sage required. |
| <b>Accounts Payable</b>                           | Record supplier invoices, schedule payments, and reconcile goods received against purchase orders in the inventory module.                                                                  |
| <b>Bank Reconciliation</b>                        | Match all payments recorded in LodgeCore against your bank statements to identify discrepancies, missing cash, or unrecorded transactions.                                                  |
| <b>Departmental P&amp;L Reporting</b>             | Separate revenue and cost reporting for Rooms, F&B, Laundry, Events, and other departments. Management can immediately identify which outlet is profitable and which needs attention.       |
| <b>Financial Period Management</b>                | Open and close accounting periods, prevent back-dated entries, and produce end-of-month financial statements with a fully locked audit trail.                                               |
| <b>Trial Balance, P&amp;L &amp; Balance Sheet</b> | Standard financial statements generated directly from the PMS without any manual spreadsheet work.                                                                                          |

## 6. Module 5 — Guest Experience & CRM

*Build lasting relationships with every guest your hotel serves.*

| Feature                         | Description                                                                                                                                                                                                                                                                   |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>360° Guest Profiles</b>      | A complete history of every guest: all previous stays, total lifetime revenue, room preferences, dietary requirements, and personal notes. When Mr. Adeyemi checks in for the fifth time, your receptionist already knows his preferred room and that he drinks black coffee. |
| <b>Automated Communications</b> | Pre-arrival welcome emails, check-in instructions, and post-checkout review requests are triggered automatically, reducing manual follow-up by the front desk.                                                                                                                |
| <b>VIP Loyalty Tiers</b>        | Configurable loyalty status levels (e.g., Silver, Gold, Platinum) that automatically apply benefits such as complimentary upgrades, discounts, or priority check-in.                                                                                                          |
| <b>Guest Mobile App</b>         | A hotel-branded progressive web app that allows guests to view their current folio, submit service requests (e.g., extra towels, room service), and access hotel information from their own smartphone.                                                                       |

## 7. Module 6 — Intelligence (AI & Analytics)

*Actionable data and AI-driven recommendations for revenue leadership.*

| Feature                    | Description                                                                                                                                                           |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Executive Dashboard</b> | A real-time visual dashboard for the General Manager and CEO showing current occupancy, daily revenue, arrivals, departures, and outstanding receivables at a glance. |

| Feature                                                | Description                                                                                                                                                               |
|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>AI Revenue Management<br/>(Advanced Deployment)</b> | Dynamic room pricing recommendations driven by local demand analysis, competitor rate monitoring, and booking pace to ensure optimal rate performance.                    |
| <b>Overbooking Engine (Advanced Deployment)</b>        | Analyses historical no-show and early-departure patterns to calculate property-specific overbooking thresholds, reducing the revenue impact of last-minute cancellations. |
| <b>Occupancy &amp; Revenue Forecasting</b>             | Forward-looking dashboards that project future occupancy and revenue based on current reservations on the books, historical patterns, and seasonal trends.                |

## 8. Module 7 — Connected (Hardware & IoT)

*Bridging the digital and physical hotel environment.*

| Feature                                                      | Description                                                                                                                                                                                                                                                               |
|--------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Smart Lock Integration</b>                                | When a reservation is created, the receptionist can encode a guest's RFID keycard directly from the LodgeCore check-in screen. The card is automatically programmed to expire at the guest's check-out time. Compatible with leading smart lock systems including Deluns. |
| <b>Energy &amp; ESG Reporting<br/>(Deployment-Dependent)</b> | Integration with smart thermostats and energy meters to track consumption, generate energy-saving reports, and produce sustainability metrics suitable for institutional and corporate clients.                                                                           |
| <b>WhatsApp AI Concierge<br/>(Advanced Deployment)</b>       | A hotel-managed WhatsApp number that accepts natural-language requests from guests (e.g., "Please send two extra pillows to Room 204"). LodgeCore's AI reads the message and routes it to the appropriate department — no human dispatcher required.                      |
| <b>Digital Staff Tipping (Advanced Deployment)</b>           | QR codes placed in guest rooms allow guests to send a cashless tip directly to their housekeeper's individual LodgeCore Staff Wallet, improving staff morale and reducing reliance on unaccounted cash gratuities.                                                        |

## 9. Module 8 — Enterprise Platform

*The governance and integration layer for hotel groups and large properties.*

| Feature                                 | Description                                                                                                                                                                                                            |
|-----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Multi-Property Management</b>        | Manage multiple hotel properties from a single administrative interface. Corporate-level dashboards aggregate performance data across the entire portfolio.                                                            |
| <b>Role-Based Access Control (RBAC)</b> | Granular user permissions ensure that a front desk agent cannot access financial reports, a waiter cannot view guest telephone numbers, and a housekeeper cannot modify reservations.                                  |
| <b>Immutable Audit Logs</b>             | Every transaction, modification, and deletion is recorded with a timestamp and user identity. Financial audit logs cannot be altered or deleted, providing a reliable trail for management review and external audits. |

| Feature                                  | Description                                                                                                                                                                                                                   |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Open API &amp; Webhooks</b>           | Documented RESTful API endpoints and webhook support allow your IT team or third-party vendors to integrate LodgeCore with any external system, including payroll, CCTV, government tax platforms, or custom reporting tools. |
| <b>Single Sign-On (SSO) (Enterprise)</b> | Enterprise clients can connect LodgeCore authentication to their organisation's existing identity provider.                                                                                                                   |

## 10. Cloud Subscription Pricing

*SaaS model — hosted on LodgeCore's secure cloud infrastructure. No server to purchase or maintain.*

|                                      | LodgeCore Essential | LodgeCore Professional  | LodgeCore Enterprise         |
|--------------------------------------|---------------------|-------------------------|------------------------------|
| <b>Property Scale</b>                | Up to 30 Rooms      | 31 – 100 Rooms          | 100+ Rooms or Multi-Property |
| <b>Users / POS Outlets</b>           | Up to 10 / 1 Outlet | Up to 30 / Multi-Outlet | Custom                       |
| <b>Standard Rate</b>                 | ■ 100,000 / mo      | ■ 200,000 / mo          | ■ 450,000+ / mo              |
| <b>Partner Programme Rate</b>        | ■ 50,000 / month    | ■ 100,000 / month       | ■ 200,000+ / month           |
| <b>Annual (2 Months Free)</b>        | ■ 500,000 / year    | ■ 1,000,000 / year      | ■ 2,000,000+ / year          |

## 11. On-Premise Perpetual Licensing

*For hotels that prefer to own the software outright and host it on their own local server infrastructure.*

| Licence Tier | Rooms    | Partner Promotional Price | Standard Price           |
|--------------|----------|---------------------------|--------------------------|
| Essential    | Up to 30 | ■ 1,500,000               | ■ <del>2,500,000</del>   |
| Professional | 31 – 100 | ■ 3,500,000               | ■ <del>5,500,000</del>   |
| Enterprise   | 100+     | Custom Quote              | Starting at ■ 6,000,000+ |

**Annual Maintenance Contract (AMC):** Billed at **15% of the initial licence fee per year**. The AMC entitles the licensee to all software updates, security patches, new feature releases, and remote technical support. Software purchased without an AMC continues to operate on the version installed at time of purchase.

*(Note: The hotel is responsible for procuring, installing, and maintaining its own server hardware under the On-Premise model.)*

## 12. Expansion Add-On Packs

Available for any edition. Add-ons can be purchased at any time during the subscription.

| Pack                         | Monthly (SaaS) | One-Time (On-Premise) | What's Included                                           |
|------------------------------|----------------|-----------------------|-----------------------------------------------------------|
| ■ Growth Pack                | ■ 25,000       | ■ 250,000             | Advanced CRM, Automated Guest Messaging, Loyalty Tiers    |
| ■ Guest Experience Pack      | ■ 35,000       | ■ 350,000             | Hotel-Branded Mobile App, Self Check-in, Service Requests |
| ■ Intelligence Pack          | ■ 45,000       | ■ 450,000             | AI Revenue Management, Forecasting, Advanced Analytics    |
| ■ Enterprise Operations Pack | ■ 60,000       | ■ 600,000             | Event & Banquet (MICE), Workforce Scheduling, Full ERP    |

## 13. Implementation, Integration & Pilot Programme

### Professional Implementation (Starting from ■ 200,000)

Our implementation team handles the complete onboarding process — system configuration, room type and rate plan setup, POS menu programming, historical data migration, keycard integration, and multi-day staff training at your property. The final fee is determined by property size, number of outlets, and scope of configuration required.

### Integration Fees

| Integration                                         | Fee                            |
|-----------------------------------------------------|--------------------------------|
| Smart Lock System Setup (e.g., Deluns)              | ■ 50,000 one-time per property |
| Custom ERP or Accounting Integration                | ■ 100,000 one-time             |
| Payment Gateway Setup (Paystack, Flutterwave, etc.) | No setup fee                   |
| SMS / WhatsApp Messaging Usage                      | Billed at provider rates       |

### The 30-Day Evaluation Programme

For hotels that require hands-on evaluation before a full commitment, LodgeCore offers a structured **30-Day Evaluation Deployment** for a fixed professional fee of ■ **100,000**, covering onboarding, configuration, and staff training for one property (hardware excluded). Upon conversion to a paid subscription or licence within 30 days of programme completion, the full ■ 100,000 evaluation fee is credited against your first invoice.

## 14. Commercial Terms & Exclusions

### Payment Terms

- All prices are exclusive of applicable VAT and taxes.
- Monthly subscriptions are billed in advance on a recurring monthly basis.
- Annual subscriptions are invoiced at the beginning of the annual term.
- Professional and Enterprise plans require a minimum 12-month commitment.
- Implementation fees are payable prior to deployment commencement.

### What Is Not Included

Unless expressly stated in the Order Form, the following are excluded from all subscription and licence fees:

- Server hardware procurement or installation
- Internet connectivity provision
- Payment gateway transaction fees
- SMS and WhatsApp provider charges
- Third-party software licences
- Custom software development outside the standard product
- On-site support beyond the agreed implementation scope

### Final Pricing

All pricing in this catalog is indicative. Final pricing, terms, and service scope are confirmed in the signed Order Form.
